Advanced Machining Process

Table of Contents

<i>Preface</i>	<i>ii</i>
<i>Acknowledgement</i>	<i>iii</i>
<i>Copyright</i>	<i>iv</i>
PART 1: ELECTRO DISCHARGE MACHINING	1
Chapter 1	2
Tool Wear rate during Electrical Discharge Machining (EDM) with Eccentric Electrode <i>Ahsan Ali Khan, Affendi Bin Saad and Mohd Zulfadli Isma Bin Mohd Isa</i>	
Chapter 2	7
Wear Ratio and Work Surface Finish during Electrical Discharge Machining (EDM) with Eccentric Electrode <i>Ahsan Ali Khan, Affendi Bin Saad and Mohd Zulfadli Isma Bin Mohd Isa</i>	
Chapter 3	12
Role of Current, Voltage and Spark on-time on Electrode Material Migration during EDM <i>Ahsan Ali Khan, Nurul Shima Mohd Noh</i>	
Chapter 4	18
A Study on Material Removal Rate during EDM with Tantalum Carbide-Copper Compacted Electrode <i>Ahsan Ali Khan, Mohammad Azhadi Bin Mohammad Hambiyah and Mohd Faiz Bin Nazi Nadin</i>	
Chapter 5	23
Features of EDM of Mild Steel with Ta-Cu Powder Compacted Electrodes <i>Ahsan Ali Khan, Mohammad Azhadi Bin Mohammad Hambiyah and Mohd Faiz Bin Nazi Nadin</i>	
Chapter 6	28
Relationship between Machining Variables and Process Characteristics during Wire EDM <i>Ahsan Ali Khan, M. B. M. Ali and N. B. M. Shaffiar</i>	

Chapter 7		33
	Influence of Machining Parameters on Surface Roughness during EDM of Mild Steel	
	<i>Ahsan Ali Khan, Erry Y.T. Adesta and Mohammad Yeakub Ali</i>	
Chapter 8		38
	Machining of Ceramic Materials: A Review	
	<i>Abdus Sabur, Md. Abdul Maleque and Mohammad Yeakub Ali</i>	
Chapter 9		44
	Formation of Micro-cracks and Recast Layer during EDM of Mild Steel using Copper Electrodes	
	<i>Ahsan Ali Khan, Erry Y.T. Adesta and Mohammad Yeakub Ali</i>	
Chapter 10		49
	Features of Electrode Wear during EDM of Mild Steel with TaC-Cu Powder Compacted Electrodes	
	<i>Ahsan Ali Khan, Mohd Faiz Bin Nazi Nadin and Mohammad Azhadi Bin Mohammad Hambiyah</i>	
Chapter 11		54
	Influence of Current, Spark On-time and Off-time on Electrode Wear during EDM of Mild Steel	
	<i>Ahsan Ali Khan, Mohd Faiz Bin Nazi Nadin and Mohammad Azhadi Bin Mohammad Hambiyah</i>	
Chapter 12		59
	A Comparative study on Work Surface Hardness EDMed by Ta-C Powder Compacted and Copper Electrodes	
	<i>Ahsan Ali Khan, Mohd Faiz Bin Nazi Nadin and Mohammad Azhadi Bin Mohammad Hambiyah</i>	
Chapter 13		65
	An Introduction to Electrical Discharge Machining	
	<i>Ahsan Ali Khan and Mohammed Baba Ndaliman</i>	
Chapter 14		70
	Developments in EDM Process Variables	
	<i>Ahsan Ali Khan, Mohammed Baba Ndaliman and Mohammad Yeakub Ali</i>	

PART 2: MICROMACHINING	76
Chapter 15	77
Focused Ion Beam Micromachining: Technology and Application <i>Israd Hakim Jaafar, Nur Atiqah, Asfana Banu, Mohammad Yeakub Ali</i>	
Chapter 16	83
Finish Cut of Titanium Alloy using Micro Electro Discharge Milling for Nano Surface Finish <i>Mohammad Yeakub Ali, Muhamad Faizal, Asfana Banu, and Nur Atiqah</i>	
Chapter 17	89
Investigation of MRR for Finish Cut of Titanium Alloy using Micro Electro Discharge Milling <i>Mohammad Yeakub Ali, Mohd Saifuddin, Nur Atiqah, and Asfana Banu</i>	
Chapter 18	95
Investigation of TWR for Finish Cut of Titanium Alloy using Micro Electro Discharge Milling <i>Mohammad Yeakub Ali, Mohd Saifuddin, Nur Atiqah, and Asfana Banu</i>	
Chapter 19	101
Investigation of Chip Formation and Minimum Chip Thickness in Micro/Meso Milling: Methodology and Design of Experiment <i>Mohammad Yeakub Ali, Noor Adila Mansor and Siti Hamizah Mass Duki</i>	
Chapter 20	107
Micro/Meso Milling of Aluminium Alloy 1100: Analysis and Modelling of Minimum Chip Thickness <i>Mohammad Yeakub Ali, Noor Adila Mansor and Siti Hamizah Mass Duki</i>	
Chapter 21	113
Effect of Micro End Milling Tool Diameter on Minimum Chip Thickness <i>Mohammad Yeakub Ali, Noor Adila Mansor and Siti Hamizah Mass Duki</i>	
Chapter 22	119
Micro Wire Electrical Discharge Machining of Tungsten Carbide: Methodology and Procedure <i>Mohammad Yeakub Ali, Ahmad Chaaban Elabtah and Musab Jamal Alrefaie</i>	
Chapter 23	124
Micro Wire Electrical Discharge Machining of Tungsten Carbide: Analysis of Surface Roughness <i>Mohammad Yeakub Ali, Ahmad Chaaban Elabtah and Musab Jamal Alrefaie</i>	
Chapter 24	130
Micro Wire Electrical Discharge Machining of Tungsten Carbide: Analysis of Material Removal Rate <i>Mohammad Yeakub Ali, Musab Jamal Alrefaie and Ahmad Chaaban Elabtah</i>	
Chapter 25	136
Micro Electro Discharge Machining of Micro Pillar Array: Process	

Chapter 25		136
	Micro Electro Discharge Machining of Micro Pillar Array: Process Development	
	<i>Mohammad Yeakub Ali, Wan Emira Azaty and Nor Suriza</i>	
Chapter 26		142
	Micro Electro Discharge Machining of Micro Pillar Array: Analysis of Surface Finish	
	<i>Mohammad Yeakub Ali, Wan Emira Azaty and Nor Suriza</i>	
Chapter 27		148
	Micro Electro Discharge Machining of Micropillar Array: Analysis of Material Removal Rate	
	<i>Mohammad Yeakub Ali, Nor Suriza and Wan Emira Azaty</i>	
Chapter 28		154
	Vibration Issue in Micro End Milling	
	<i>Mohammad Yeakub Ali, Muhamad Lutfi and Mohamad Ismail Fahmi</i>	
Chapter 29		159
	Fabrication of Micro Filter by Electro Discharge Machining	
	<i>Abdus Sabur and Mohammad Yeakub Ali</i>	

PART 3: PRECISION MACHINING	165
Chapter 30	166
High Speed Milling of Mould Steel using 1.5mm-diameter End-mills <i>Mohamed Konneh, Khairunnisa Ahmad and Rose Fazleen</i>	
Chapter 31	172
Precision Grinding of Silicon Carbide using 46 μm Grain Diamond Cup Wheel <i>Mohamed Konneh and Ahmad Fauzan</i>	
Chapter 32	178
Precision Grinding of Silicon Carbide using 76 μm Grain Diamond Cup Wheel <i>Mohamed Konneh and Mohd Shukur Zawawi</i>	
Chapter 33	184
Precision Grinding of Silicon Carbide using 107 μm Grain Diamond Cup Wheel <i>Mohamed Konneh and Mohd Fadzil</i>	
Chapter 34	190
Investigation of Surface Integrity during Precision Grinding of Silicon Carbide using Diamond Grinding Pins <i>Mohamed Konneh, Mohamad Lutfi and Mohamad Shahrilnizam</i>	
Chapter 35	196
A Comparative Study on Flank Wear and Work Surface Finish during High Speed Milling of Cast Iron with Different Carbide Tools <i>Ahsan Ali Khan, Zuraida Aman Nor Rasid and Izausmawati Yusof</i>	

Finish Cut of Titanium Alloy using Micro Electro Discharge Milling for Nano Surface Finish

Keywords: Nano surface finish, Titanium alloy, Micro EDM

Abstract. Project aims to optimize micro-ED Milling process parameters for machining titanium alloy for nano surface finish. Average surface roughness (R_a) and maximum peak-to-valley roughness height (R_z) were chosen as observed performance criteria. In addition, four independent parameters such as gap voltage, capacitance, polarity, and feed rate were analyzed by the Taguchi method. Based on ANOVA, significant parameters and their optimal combination were obtained. Experimental result indicates that machining performances are affected mostly by capacitance and gap voltage during micro-ED milling of titanium alloy. Empirical equations among various process parameters and micro-ED Milling performance criteria have been developed.

Introduction

Micro EDM is the application of EDM on microfield. Micro EDM has similar characteristics as EDM except the size of the tool, discharge energy and axes movement resolutions are in micron level with high accuracy, and can process any conductive materials regardless of hardness, it has become one of the most important methods for manufacturing micro-features and parts with sub-micrometer order size [1]. The specialty of micro EDM is the ability to machine micro features from a wide varieties of materials with complex structures such as micromold cavity for injection molding and hot embossing. However, this process is time consuming and costly [2].

Measuring the dimensions or the surface quality of micro-features is not an easy task. There are not even standardized methods of determining the surface roughness, which is one of the most important characteristics for micro-tooling. Estimation of the recast layer and heat-affected zone, which affect the properties of the machined surface, requires specialized equipment. Tungsten carbide can be used as the tool electrode since it is a super-hard, wear-resistance, corrosion-resistant and heat resistant alloy. Tungsten carbide easily to machine into tiny sizes without deformation because of its high strength and rigidity, and therefore, it was suited to make the high aspect ratio microstructures and micro components. Thus, the objective of this research is to study the process parameter of micro ED milling in response to surface roughness (R_a) and maximum peak-to-valley roughness height (R_z).
